## Lab Workbook

### Unit 4

## Mechanical Systems

# Levers in Action

**Problem:** How does changing the position of the fulcrum affect the effort force in different levers?

**Hypothesis:** \_\_\_\_\_  
\_\_\_\_\_

**Investigative Procedure:** Follow the directions outlined on pages 272 - 273

**Data Collection:**

Position of Load	Type of Lever	Effort Force Required ... (Description)
P <sub>1</sub>	Class 1	
P <sub>2</sub>	Class 1	
P <sub>3</sub>	Class 1	
P <sub>1</sub>	Class 2	
P <sub>2</sub>	Class 2	
P <sub>3</sub>	Class 2	
P <sub>1</sub>	Class 3	
P <sub>2</sub>	Class 3	
P <sub>3</sub>	Class 3

# Pick It Up !

Investigation 4-C  
Page 294

**Problem:** What is the best design of a prototype for a **crane**, to lift a **load of 12 N** with an **effort force of 4 N**?

**Hypothesis:** \_\_\_\_\_  
\_\_\_\_\_

**Plan and Construct:** (Directions given on page 294 – Science Focus Textbook)

- Step 1 – Discuss various designs that can accomplish the task
- Step 2 – Select the materials to use for your prototype from the materials provided
- Step 3 – Get permission to build your prototype (Teacher's approval)
- Step 4 – Draw a Blueprint, identifying component parts and their functions
- Step 5 – Construct your prototype
- Step 6 – Test your prototype

# Easy Lifting

Investigation 4-D  
Pages 300 - 301

**Problem 1:** How can you calculate the mechanical advantage of a compound pulley?

**Hypothesis:** \_\_\_\_\_  
\_\_\_\_\_

**Problem 2:** How can you test the efficiency of a pulley system?

**Hypothesis:** \_\_\_\_\_  
\_\_\_\_\_

**Investigative Procedure:** Follow the directions outlined on pages 300-301

**Data Collection:** (Table Title) \_\_\_\_\_

Trial	Load	Effort	Number of Ropes
A			
B			
C			
D			
E			

## **Analysis:**

1. Analysis Table Title \_\_\_\_\_
2. (Calculate the Mechanical Advantage and complete the column in the table)
3. (Record # of Ropes column in the Analysis table below)

Trial	Number of Ropes	Mechanical Advantage

# Egg Drop

Investigation 4-E  
Page 306

**Problem:** How can you design and build a structure that will protect (prevent it from cracking) a raw egg that is dropped from a height of 2 m?

**Hypothesis:** \_\_\_\_\_

\_\_\_\_\_

## **Design Specifications:**

- no more than 50 straws and 1 m of masking tape
- egg must be dropped from a height of at least 2m
- cracks or complete breakage will result in failure of the structure

## **Plan and Construct:** (Directions given on page 306 – Science Focus Textbook)

- Step 1** – Discuss various designs that can accomplish the task  
**Step 2** – Select the materials to use for your prototype from the materials provided  
**Step 3** – Get permission to build your prototype (Teacher’s approval)  
**Step 4** – Draw a Blueprint, identifying component parts and their functions  
**Step 5** – Construct your prototype  
**Step 6** – Test

# Build Your Own Hydraulic Lift

Investigation 4-G  
Page 311

**Challenge:** Design and build a model of a hydraulic lift that will exert a large enough force on a load when you exert a small force on the lift. To make it more interesting, see if your design will incorporate

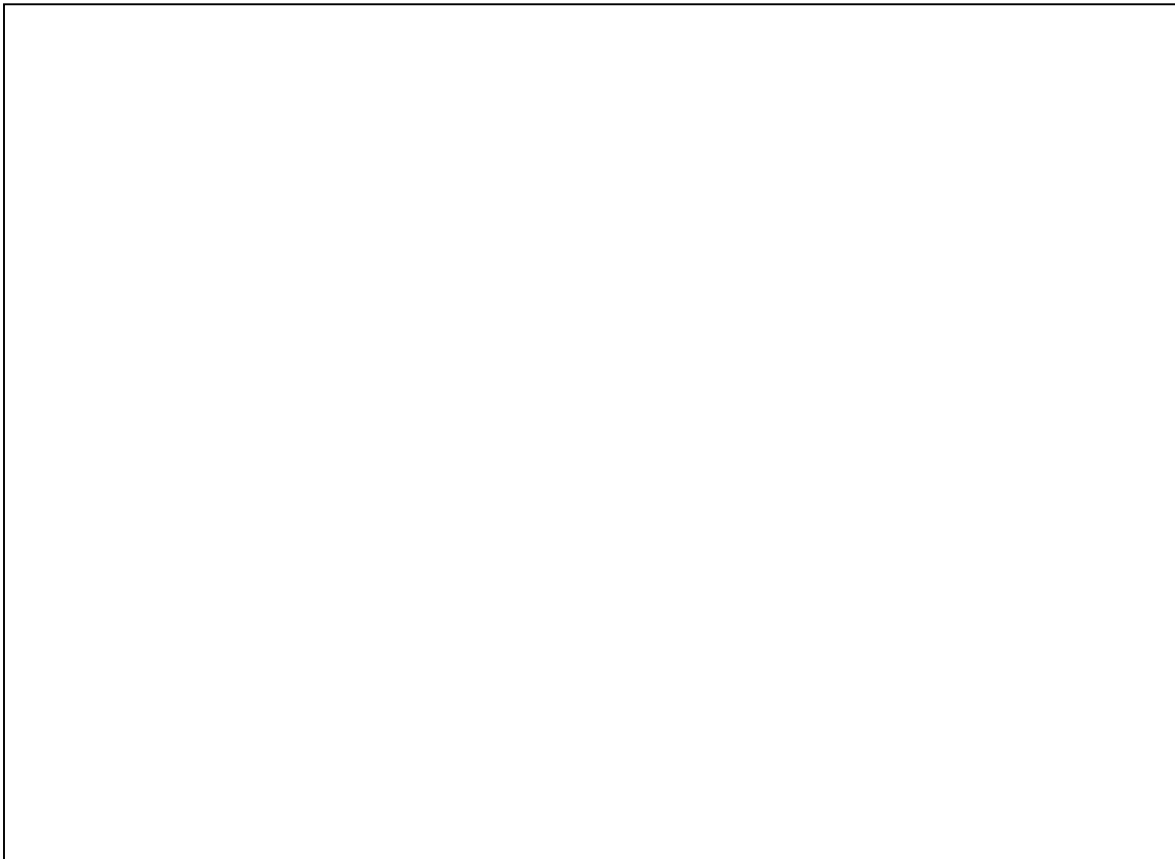

**Design Specifications:**

- your lift must exert a force in one place when you exert a force in a different place
- no air bubbles (in tubing or syringes)
- an observable mechanical advantage must be evident

**Plan and Construct:** (Directions given on page 311 – Science Focus Textbook)

- Step 1** – Discuss various designs that can accomplish the task  
(predict an arrangement that will allow you to balance the 250g and 1 kg masses on the two modified syringes)
- Step 2** – Decide on a design that will attempt to raise the 1kg mass with the least force  
(test your design)
- Step 3** – Build your prototype
- Step 4** – Draw a Blueprint, identifying component parts and their size specifications
- Step 5** – Test your design

# New, Improved Robots Required!

Investigation 4-J

Page 329

**Challenge:** Can you design a robot arm by applying what you have learned from Topics 1-6?

## **Design Specifications:**

- your robot arm must be **powered**
- must be able to pick up a container and move it **10cm** and drop it
- this powered action must be done in **less than 1 min.**
- the robotic arm must be able to **move up and down** as well as from **side to side**
- it must have an **operational jaw mechanism**
- **three different mechanisms** must be combined in the working prototype (model)
- you are **not allowed to touch the device** during **pickup, transport or unloading**

## **Plan and Construct:** (Directions given on page 311 – Science Focus Textbook)

**Step 1** – Discuss various designs that can accomplish the task  
(predict which design will allow you to meet all the specifications)

**Step 2** – How will your arm manoeuvre and stop?

**Step 3** – Build your prototype

**Step 4** – Draw a Blueprint, identifying component parts and their size specifications

**Step 5** – Test it (does it balance the load?)
