***Inquiry E-1***

**How Big Is The Sun?** (p. 380-381)

**Question:** Can we accurately measure the diameter of the Sun by using an indirect method?

**Hypothesis:** \_\_\_\_\_

---

**Materials and Procedure:** (p. 380-381)

**Data Collection:**

| Trial 1 Diameter | Trial 2 Diameter | Trial 3 Diameter |
|------------------|------------------|------------------|
|                  |                  |                  |

**Analyzing and Interpreting:**

7. Average diameter = \_\_\_\_\_

8.  $\frac{d}{100 \text{ cm}} = \frac{D}{150\,000\,000 \text{ km}}$

9. 'Percent error' calculation =  $\frac{(\text{actual value} - \text{measured value})}{\text{actual value}} \times 100$

## DESIGNING A SOLAR SAIL-POWERED SPACECRAFT (p. 414-415)

Follow the procedures outlined for this activity (on p. 414-415) as a Lab, or use this Alternative Project Activity

### Description of Goal

To design and construct a prototype model of a **Solar Sail-powered Spacecraft**.  
(**optional**: a *working* model should be solar powered and perform the task using only light as the power source)

### Background:

The solar sail is likely the next great advance for interplanetary flight. Using the power of the sun (to generate electricity) to run a fan, your prototype model will carry a payload to a specified destination and will be scored on the success of the mission.

### Specifications:

- Prototype must be your own design.
- Size is limited to spacecraft body which should not exceed 15cm long and 6cm wide
- Choice of materials is open  
(*no commercially-developed robotic kits will be allowed – ie. Lego, Knex, Mechano, etc.*)
- You will be required to sail your spacecraft to the **target planet**, during the test phase.
- Spacecraft must travel in a straight line to its destination.
- It will be timed (speed is important).
- Impact or loss of payload will be penalized.
- Project **Report** should include:
  - Design Blueprint
  - Procedural Outline
    - *Construction Details*
  - Troubleshooting
  - Questions that you developed as a self analysis (reflection) of this project and the reality or science fiction it holds for you
  - Feedback sheet and recommendations from peers

Give It A **TRY**

| Problems encountered: | Solutions: |

***Inquiry E-6***

**HOW FAR IS IT?** (p. 448-449)

**Question:** How accurately can the length of a playing field be measured using triangulation?

**Prediction:** \_\_\_\_\_

| Baseline Length (m) | Angle Position A (°) | Angle Position B (°) | Calculated length of field (m) | Actual length of field (m) | Percent Error (%) |
|---------------------|----------------------|----------------------|--------------------------------|----------------------------|-------------------|
| 10                  |                      |                      |                                |                            |                   |
| 20                  |                      |                      |                                |                            |                   |
| 30                  |                      |                      |                                |                            |                   |

**Analyzing and Interpreting:**

### 7. Scale Drawings

**10m**

**20m**

30m

8. \_\_\_\_\_

9. See Table

10. See Table

Formula ... percent error =  $\frac{\text{actual value} - \text{measured value}}{\text{actual value}} \times 100$

11. Average % error

$\frac{(\text{10m \% error}) + (\text{20m \% error}) + (\text{30m \% error})}{3} = \text{_____ \% error}$
