#### **REVIEW**

#### Unit 2 - Plants For Food And Fibre

## 1.0 Structures and Life Processes

- ❖ Seed plants have roots, stems, leaves and either flowers or cones
- Each structure performs a specific function
- ❖ Life processes in plants include: Photosynthesis, Transpiration Gas exchange (cellular respiration)
- Seed plant life cycle includes three stages: Seed stage, Seedling stage, and Adult stage
- ❖ **Pollination** is the joining of pollen and ovary
- ❖ Seed plants can also reproduce in ways not involving seeds: Runners, rhizomes, suckers, cuttings and grafting
- ❖ Adaptations help plants get what they need from the environment
- Growing conditions varies between and among plants, and can be modified using technology

## 2.0 Role of Plants to Meet Human Needs

- Plants supply oxygen and food
- ❖ Plants are used for food, fibre (to make things), medicine, and other products
- Natural resources vs Managed resources

## 3.0 Soil

- Minerals and organic matter in different amounts make clay, sandy soil or loam
- Growing and harvesting methods can improve or degrade soil

# 4.0 Growing and Using Plants – Sustainability

- ❖ Selective breeding provides specific desirable traits
- New varieties may lead to environmental problems
- ❖ Resistance, loss of species or pollution can occur with long term use of herbicides and pesticides
- Sustainability balancing out needs with the needs of the environment and the consequences (social and economic)
