REVIEW

Unit 3 – Heat and Temperature

1.0 Technologies for Obtaining and Controlling Heat

- Heat technologies have evolved over time
- Culture and technology are linked
- Evolution has integrated heat-related materials and technologies
- Choices about the environment involves individuals and society

2.0 Heat Affects Matter

- Transferring heat to and from matter can cause a change in state
- ❖ The Particle Model of Matter explains changes in state and volume
- Conduction (in contact), Convection (circular motion) and Radiation (waves)
- ❖ Thermal energy is the total kinetic energy of the particles in a substance heat is transferred from an area of high kinetic energy to an area of low kinetic energy
- ❖ Temperature is the measure of the average kinetic energy of the particles in a substance

3.0 Natural Phenomena and Technology Devices

- ❖ Thermal energy is produced by the Sun, decay, fire and geothermal
- Passive and Active solar heating systems use the sun's energy and are environmentally friendly
- ❖ Thermostats control temperature in heating systems
- ❖ Insulation helps block unwanted heat transfer (heat loss)

4.0 Benefits and Costs of Heat Technologies

- ❖ Non-renewable resources have a limited supply
- ❖ Fossil fuels are the major sources of heating, but degrade the environment
- ❖ Costs of using natural resources: economic, environmental and societal
- Energy Alternatives: solar, wind, geothermal, nuclear and hydro-electric (gravitational)
